

Scenario 01

The Canadian Launch — Moomoo

Role: Senior Product Manager, Moomoo Canada

Product: Moomoo Canadian mobile trading app

Timeframe: 6 iterations (simulated 6-week quarter)

Difficulty: Intermediate–Advanced

Target skills: Regulated fintech PM · mobile product · international expansion · stakeholder navigation · social features · brokerage ops

Authored: 2026-04-19 · For PRAXIS interview-prep build · Mike Hamata / Moomoo Senior PM interview

1. Setup & Premise

You've just joined Moomoo Canada as Senior PM, 8 weeks in. Moomoo is a fast-growing, Hong Kong-listed mobile trading platform (parent: Futu Holdings) known for low-cost US equity access and strong social-investing features. You're responsible for the Canadian app experience, shipped to market 6 months ago. Canada is Moomoo's third international expansion after Singapore and Australia.

You inherited a roadmap from a departed PM, a 6-person Canadian squad (3 devs, 1 designer, 1 QA, yourself), a Chinese parent company with aggressive growth targets, and a regulatory environment (CIRO, provincial commissions) you must respect but the Chinese parent doesn't fully understand.

Your quarter-ending ask from HQ: "Hit 100,000 active Canadian retail traders by end of quarter with at least 40% mobile DAU/MAU ratio. Show us Canada can scale."

Current state (what's true at iteration 1)

- ~22,000 active Canadian users (need to 5x in 6 weeks — unrealistic but you must show progress)
- Product-market fit unclear — retention is poor after day 14
- Wealthsimple and Questrade dominate Canadian retail, with brand trust Moomoo lacks
- Moomoo's Canadian app is a thin localization of the US/HK apps — some features feel foreign
- Canadian users want TFSA/RRSP support (critical local feature) — not prioritized by HQ
- Social feed is active but largely cross-posted from US users; Canadian voice is quiet
- Market-data costs are eating the P&L — Canadian users expect US data for free
- Team morale is mixed after PM departure; devs feel whipsawed between HQ asks and local reality

Moomoo's structural constraints (these matter)

- **HQ decision speed is slow** — platform changes need HK sign-off; local changes you can own
- **Compliance is non-negotiable** — CIRO enforcement is strict; a social-feed feature that works in HK can get you fined in Canada
- **Mobile-first, always** — 95% of Canadian sessions are mobile; desktop is an afterthought
- **Parent company prizes growth metrics** — DAU, signups, volume — less interest in retention or NPS
- **"Pro trader" user archetype dominates HQ thinking** — Canadian market is mostly beginners

2. Win / Lose Conditions

Outcome	Condition
🏆 Strong win	End of quarter: >60K active users · >50% day-14 retention · Customer Happiness sum >35 · Tech debt <40 · HQ trust intact
✅ Acceptable win	>40K active users · retention stable · no regulatory incident · HQ trust intact

⚠ Mixed	Growth but tech debt >60 OR HQ trust damaged OR regulatory warning issued
✗ Lose	<30K users OR CIRO incident OR team member quits OR TFSA feature not shipped

3. Personas

🇨🇦 Maya (New Canadian Investor)

Archetype: Mainstream · **Starting state:** INTERESTED · **LTV:** CA\$850 · **Voice:** Quiet but refers friends

32, Toronto, marketing professional, first brokerage account. Wants TFSA support, low fees, and an app that doesn't terrify her. Comparing Moomoo to Wealthsimple.

Wants: TFSA, beginner education, simple UI, tax-time summaries, CAD-priority display

🇺🇸 Darren (Active Canadian Trader)

Archetype: Power user · **Starting state:** ACTIVE · **LTV:** CA\$3,200 · **Voice:** Loud on social + Reddit

42, Calgary, day-trades US options part-time, currently uses Interactive Brokers. Tried Moomoo for Level 2 data. Will tweet.

Wants: US options + Level 2, low commissions, fast execution, pre-market extended hours, chart quality

🎓 Priya (Aspiring Investor)

Archetype: Innovator · **Starting state:** DORMANT · **LTV:** CA\$400 · **Voice:** Talks to peers

24, Vancouver, recent grad, has \$2K to invest. Hangs out in r/CanadianInvestor, follows influencers on TikTok. Looking for a brokerage that feels modern.

Wants: Fractional shares, social feed with Canadian voices, educational content, TikTok/Instagram presence

👤 Wei (HQ Growth VP — stakeholder persona)

Archetype: Enterprise stakeholder · **Starting state:** ACTIVE · **Trust:** 6/10 · **Voice:** Authoritative, slow

Moomoo VP of International Growth, based in HK. Reports to CEO. Measures you on weekly DAU numbers. Doesn't understand why Canada needs TFSA.

Wants: Weekly growth slides, no regulatory incidents, fast execution of HQ strategy, loyalty

⚖️ Aisha (CIRO Compliance Officer — stakeholder persona)

Archetype: Regulated · **Starting state:** ACTIVE · **Trust:** 8/10 · **Voice:** Formal, urgent when triggered

Internal compliance lead, based in Toronto. 15 years at CIRO/IIROC. Has veto on any user-facing feature. Relationship matters.

Wants: Features reviewed before launch, social feed moderation, clear risk disclosures, KYC/AML integrity

4. Product Backlog

Format: effort value who benefits

Customer-facing features

TFSA Account Support effort: 10 value: very high Maya · Priya · Core Canadian expectation. HQ has not prioritized it. Without it, Maya likely churns by iteration 3.
RRSP Account Support effort: 12 value: high Maya · Second most-requested local feature. Regulatory + tax complexity.
Fractional Shares (US equities) effort: 6 value: high Priya · Critical for young investors with small balances.
Level 2 US Market Data (free tier) effort: 4 value: high Darren · Competitive hook. But burns ~\$180K/quarter in market-data costs. P&L impact.
US Options Trading (with Canadian tax reporting) effort: 14 value: very high Darren · Major differentiator vs Wealthsimple. Complex clearing (OCC) + tax integration.
Canadian Social Feed (localized) effort: 8 value: medium Priya · Canadian voices, Canadian stocks. Compliance must review: can users post "bullish" buttons without financial advice violations?
Pre-Market & Extended Hours Trading effort: 7 value: medium Darren · Expected by active traders. Requires operational coverage changes.
CAD-Priority Display (native currency toggle) effort: 3 value: medium Maya · Priya · Quick UX win. Current UI defaults to USD — disorienting for Canadians.
Beginner Onboarding Flow (Canadian context) effort: 5 value: high Maya · Priya · Current onboarding is HK-flavored. Canadian-specific tutorials would lift activation 15%+.
Tax Reporting Export (T5008 / T5 support) effort: 6 value: medium Maya · Darren · Canadian tax-time necessity. Missing today means manual export workarounds.
Education Center (Canadian context) effort: 4 value: medium Maya · Priya · Content: TFSA vs RRSP, Canadian tax on US dividends, etc. Could be content-only.
Referral Program (CA\$ bonus)

effort: 5 value: high all personas · Viral growth lever. Legal review required for compensation structure.

Auto-Invest Feature (scheduled buys)

effort: 7 value: medium Maya · Priya · Beginner-friendly. Wealthsimple has this.

Push Notification Improvements (Canadian market hours)

effort: 2 value: low-medium Darren · Currently sends US-timed alerts at 3:30am ET. Easy fix.

Tech / Platform backlog

Canadian KYC Pipeline Rebuild

effort: 8 benefit · Reduces signup drop-off 20% · lowers CIRO risk · unlocks faster future onboarding iterations

Feature Flag Infrastructure (per-geo)

effort: 4 benefit · Canada-specific rollouts no longer require HQ deploy window · 3pt release cost savings/iteration

Market Data Cost Optimization

effort: 5 benefit · Smarter caching, user-tier gating · saves ~\$80K/quarter

Compliance Review Automation (pre-launch checklist)

effort: 3 benefit · Reduces CIRO event probability by 50% · better relationship with Aisha

Analytics Pipeline Fix (Canadian events are mis-tagged)

effort: 4 benefit · Unlocks retention/activation measurement · required before any experiment

5. Event Deck (25 cards)

Events fire between or during iterations. Each offers 2–3 response options. Some events are seeded (forced to fire). Others are weighted by your prior decisions.

Stakeholder events (HQ / compliance / internal)

STAKEHOLDER · FORCED ITER 2

Wei (HQ) Demands: "Launch a crypto tab by month-end"

Email lands Monday morning. HQ noticed competitor brokerages offering crypto; wants Moomoo CA to match. Your team has zero crypto expertise. Provincial regulations vary wildly.

- **Accept and commit** — devote 2 devs for 3 iterations; drops TFSA. HQ trust +2, team morale –3, tech debt +15, CIRO risk event probability +20%.
- **Propose a trade-off in writing** — "We can do crypto OR TFSA, not both. Here's the math." HQ trust –1 short-term, +2 long-term if delivery is solid.
- **Defer with a plan** — "Here's our phased approach; Q3 exploration." HQ trust –2, team morale +2, schedule preserved.

COMPLIANCE · WEIGHTED

Aisha flags the Social Feed: "Some posts look like unlicensed advice"

CIRO just updated guidance on "finfluencer" content. Aisha pauses the social feature build and wants a moderation framework before launch.

- **Full pause + compliance redesign** — Social feed delayed 2 iterations. Priya engagement drops. Aisha trust +2.
- **Ship with a simple disclaimer** — Risk: 30% chance of CIRO warning event. If fires: public, reputationally damaging.
- **Build moderation pipeline in parallel** — +5 tech effort, launch in 1 iteration. Aisha trust +1. Feasibility requires engineering bandwidth.

COMPLIANCE · RANDOM

CIRO Inquiry: "We'd like to review your margin disclosures"

Routine inquiry, but timing is bad. Aisha needs 3 days of dev time + PM time to respond.

- **Drop everything to respond** — Sprint derailed. Next iteration velocity -5. Long-term Aisha trust +1.
- **Partial response, request extension** — Velocity -2, some risk.
- **Delegate to Aisha + junior dev** — You protect your time, but Aisha feels unsupported.

STAKEHOLDER · RANDOM

HQ Engineer comes to your team directly

Chen, a senior engineer from HK, messages your devs directly on WeChat asking them to help fix an HQ bug "while they have capacity." Your devs are flattered and confused.

- **Ignore** — Boundary unclear. If repeats 2x, sprint velocity erodes silently.
- **Tell devs politely "route through me"** — Establishes boundary. Chen is mildly offended.
- **Escalate to Wei** — Nuclear option. Wei sides with Chen. Your position weakens.

Customer events

CUSTOMER · WEIGHTED

Darren goes public on r/CanadianInvestor

Reddit post: "I switched from Moomoo back to IBKR — here's why." 1,200 upvotes. Topics: no TFSA, missing options, US options tax is a mess, app freezes during opens.

- **Respond publicly with roadmap** — Promises carry risk if not delivered. Priya engagement +1.
- **Reach out to Darren privately** — Low public signal. Humanizes the response. Small chance of winning him back.
- **Internal review + no public response** — Narrative drifts away from your control.

CUSTOMER · RANDOM

Priya brings 14 friends

If Priya's state reaches ADVOCATE, she becomes a campus club rep at UBC. 14 signups this iteration. Activation quality depends on onboarding UX.

- **Engage personally** — Offer Priya a \$200 Amazon card + spotlight her. Community-building signal.
- **Roll with it, normalize** — Track activations but no special outreach.

CUSTOMER · WEIGHTED

Maya considers Wealthsimple

If TFSA hasn't shipped by iteration 3, Maya's customer messages mention Wealthsimple by name. If nothing changes, she churns by iter 4.

Team events

TEAM · WEIGHTED

Your tech lead asks for a 1:1

Max (tech lead) wants to talk. He's frustrated about "whiplash" priorities. Hasn't said "quitting" but you recognize the signals.

- **Hear him out, commit to fewer mid-sprint changes** — Morale +2. Constrains your HQ-response flexibility.
- **Explain HQ pressure, ask for patience** — Morale unchanged. Short-term. Long-term risk.
- **Involve him in roadmap decisions** — Morale +3; you may spend more time in meetings.

TEAM · RANDOM

Designer proposes a total app redesign

Your designer wants to overhaul the whole UI to feel Canadian-native. 8 weeks of work. "It'll fix half our problems."

- **Full commit** — 80% of quarter on redesign. HQ trust tanks. Might leapfrog the competition.
- **Partial** — "Canadian theme" layer — 2 iterations of UI work; accept technical scaffolding later.
- **Reject with explanation** — Designer morale -2 unless you frame it well.

Market events

MARKET · FORCED ITER 4

Wealthsimple launches US options

Press release: Wealthsimple adds US options trading with Canadian tax integration. Darren's last differentiator for Moomoo is gone.

- **Accelerate your own options launch** — Risk quality; 40% chance of compliance issue if rushed.
- **Pivot narrative to community/social** — Lean into Moomoo's HK strength.
- **Retention focus** — Double-down on Canadian-only features Wealthsimple can't easily match.

MARKET · RANDOM

Market volatility spike

S&P down 6% in two days. Trading volume up 300%. Your infrastructure wobbles during peak hours.

- **All-hands infra response** — Iteration paused. Customer-facing work stalls. Reliability saved.
- **Targeted fixes, keep features moving** — Risk: 25% chance of outage event next iteration.
- **Full iteration detour to reliability** — Saves the platform; HQ grumbles.

Tech events (triggered by behaviour)

TECH · DEBT > 40

"The KYC pipeline broke overnight"

Signups dropped 60%. Root cause: technical debt in the pipeline you never fixed. Hot-patch needed immediately.

TECH · NO REFINEMENT 2x IN ROW

"Fractional shares was more complex than we estimated"

What you thought was 6 pts turns out to be 10 pts. Mid-sprint.

TECH · REFACTOR DEFERRED 3x

Senior dev announces they're leaving

"Citing tech debt and lack of investment in our platform." 4-week notice.

6. Scenario Narrative Beats

Each iteration has a narrative framing shown before planning:

Iter	Framing text (shown to player)
1	"Week 1 of the quarter. HQ sent a Slack message over the weekend reminding you of the 100K target. Aisha scheduled a compliance review for Thursday. Your designer dropped a Figma file for a Canadian-theme redesign. Choose what ships."
2	"Week 2. Signup numbers are flat. A Reddit thread about Moomoo is gaining traction. Wei (HQ) emailed at 2am HK time asking for 'the plan.'"
3	"Week 3. Maya's feedback is getting sharper. Some team members are pushing to deprioritize HQ's latest ask. The quarterly business review is in 3 weeks."
4	"Week 4 — midpoint. You're behind on user targets. Wealthsimple just announced options trading. The next two iterations will define the quarter."
5	"Week 5. Whatever's not shipping by end of iteration 6 is not shipping. Compliance wants final sign-offs. Team is watching how you close."

6	"Week 6 — final sprint. Quarterly review is Monday. Your team needs a win. Decide what ships, what's banked, and what gets cut."
---	--

7. Learning Goals for Mike (Senior PM interview prep)

This scenario is specifically designed to rehearse skills Moomoo's interview will test. Moomoo is a fast-moving, Chinese-parent mobile brokerage expanding internationally. Senior PM candidates will face questions on:

- **Stakeholder navigation** — how do you manage HQ pressure while protecting local product quality?
- **Regulatory judgment** — CIRO/compliance is non-negotiable; show you understand when to push back
- **Growth vs retention** — HQ wants DAU; PMF needs retention; which do you pick and why?
- **Prioritization** — with 14 customer asks and 5 tech investments and unlimited demand, what ships?
- **Team leadership** — you're likely managing a local team with a global parent — boundary work
- **Product decisions under ambiguity** — no playbook; write your own

Running this scenario 3x with different strategies (growth-first / compliance-first / retention-first) gives you three defensible narratives for behavioral questions like "Tell me about a time you had to push back on leadership."

8. Rehearsal Plan

1. **Playthrough 1: "The HQ Loyalist"** — Accept every HQ ask. Observe what breaks. Document in retro.
2. **Playthrough 2: "The Local Product Leader"** — Ship TFSA in iter 1. Push back on crypto. See how HQ trust evolves.
3. **Playthrough 3: "The Compliance-First PM"** — Invest heavily in the compliance automation tech item first. Ship nothing customer-facing until iter 2.
4. **Review all 3 AI retrospectives side-by-side.** Notice which patterns emerge. Write your 3 best-defensible decisions down as interview stories.
5. **Day-of: pick the strategy that best matches how Moomoo signals in the interview.** If they love growth, emphasize playthrough 1. If they emphasize compliance, emphasize playthrough 3. Adapt.

Bottom line: this scenario is calibrated to the actual pressures a Senior PM at Moomoo Canada faces — rooted in your Questrade domain knowledge (CIRO, TFSA/RRSP, US options clearing, customer acquisition in Canada) and built to surface the specific tensions that make for strong interview narratives.
